

LOGAN BRUNET

Orlando, FL (Hybrid/Remote/Onsite) | loganwbrunet@gmail.com | [linkedin.com/logan-brunet](https://www.linkedin.com/in/logan-brunet) | github.com/lobotomy-x/portfolio

SUMMARY

Software engineer specializing in real-time 3D, game engine development, and immersive experiences. Hands-on across Unreal Engine, Unity, WebXR, C++, C#, and Lua, with deep experience in rendering pipelines, developer tooling, and 3D asset creation. Extensive Blender background with 10,000+ hours and two years of paid 3D work including VR-ready architecture models. Comfortable owning full technical stacks from engine client through backend services and deployment.

TECHNICAL SKILLS

Languages: C++, C# (.NET 6.0–10.0 / .NET Framework), Python 3, Lua, JavaScript/TypeScript, HLSL, GLSL, Kotlin

Engines & Frameworks: Unreal Engine 4/5, Unity (URP/HDRP, Game Dev coursework), WebXR, ARKit/ARCore, .NET Core/WPF, WinAPI, ImGui, D3D11/12, Vulkan, Sol2

3D & Creative: Blender (10k+ hrs, 2 yrs paid), VR-ready modeling, animation rigging, real-time asset pipelines, Adobe Creative Cloud

Web & Backend: REST APIs, JavaScript/TypeScript, React (familiar), SQL, Spring Boot, Java — Full Stack Developer bootcamp (Per Scholas)

AI & Tooling: LLM API integration, generative AI workflows (Claude, Copilot, Gemini), prompt engineering, AI-assisted asset pipelines

Tools: Git, VS Code, Visual Studio, Rider, Jira, Confluence, Tortoise SVN, Adobe CC

PROFESSIONAL EXPERIENCE

Game Tools & Modding Engineer | micro1 (Contract)

May 2026 – Present | Remote

- Real-time graphics tooling and engine-level C++ development focused on rendering systems and performance.
- Building DX11/DX12 capture pipeline on a custom ReShade fork — DXGI swapchain hooks, unified backend abstraction, frame-accurate QPC synchronization.
- Plugin executes Lua and injects UEVR directly from ReShade, replicating an existing UE4SS implementation without a separate loader.

Unreal Game / Simulation Developer | Adacel

January 2026 – April 2026 | Orlando, FL (Hybrid)

- Modernized legacy simulation codebase to modern C++ and Epic Games internal standards — memory-safe pointer logic, UObject reflection, modular UPROPERTY/UFUNCTION systems for designer-friendly Blueprint extension.
- Designed and built suite of ImGui-based diagnostic plugins providing real-time telemetry, performance profiling, and runtime debugging for high-fidelity simulation environments.
- Advised technical lead directly on Unreal Engine architecture, internals, and core gameplay framework decisions.
- Conducted vulnerability audits of proprietary engine assets and serialization protocols; designed IP protection roadmap.
- Built and evaluated AI-based workflows for project setup, IP protection, debugging, and code refactoring with effective prompt engineering.

Consultant — Immersive Tools & Engine Development | Self-Employed

May 2023 – December 2025 | Remote

Unreal Engine VR Injector (UEVR Contributor)

- Contributed to open-source Unreal Engine injection platform used by thousands — upgraded ImGui across 5 years of upstream versions with full docking support, nearly doubled Lua binding surface (~1900 to ~3500 lines).
- Authored Matrix4x4 and Transform Lua bindings from scratch; implemented Unreal Engine core math library in pure Lua (vectors, quaternions, transforms, projection matrices).
- Built C#/WPF frontend: automatic usermode DLL injection into any Unreal Engine game, system tray, GitHub auto-update widget, full settings UI.
- Wrote API documentation and Lua training guide actively used by modding community; supported and trained over a dozen active modders.

ReShade Open Source Contributor

- Implemented text editor features, HLSL shaders for graphics debugging and post-process effects; collaborated with large active graphics programming community.

3D Artist | Brown Center for Computation and Visualization

Providence, RI

- Created VR-ready 3D models of campus architecture for real-time delivery. Portfolio samples available on request.

EDUCATION

Bachelor of Science, Cognitive Neuroscience | Brown University

Computational Cognitive Neuroscience, Statistical Inference, Game Development (Unity), Public Speaking

Bootcamps: Full Stack Developer, Per Scholas (Java, Spring Boot, SQL, JavaScript, REST APIs) | Data Analytics, General Assembly (Excel, Tableau, SQL)

AP Scores: Computer Science (5), BC Calculus (5), Chemistry (5) | National Hispanic Scholar, AP Scholar with Distinction
